La température

Il fait 32 dégrés—et on va à la plage?! (It's 32 degrees—and we're going to the beach?!)
In France, and most the rest of the world, they use Celsius. Here are a few ways
to convert between Celsius and Fahrenheit.

1) Méthode un: Memorize **reference points** (rounded to nearest degree). You might memorize a few
and estimate from there.

F°	-40	0	10	20	32	40	50	60	70	80	90	99	212
C°	-40	-18	-12	-7	0	4	10	16	21	27	32	37	100
	F°=C°				water freezes							body temp.	water boils

2) Méthode deux: How to do a quick **estimate** in your head: (accuracy of about ± 1°C for normal weather)

To estimate Celsius into Fahrenheit: **C x 2 + 30 = F**
To estimate Fahrenheit into Celsius: **(F - 32) ÷ 2 = C**

3) Méthode trois: Learn the **official formulas** (This will give you the exact temp, and if you can do it on the spot, you'll
amaze all your friends with your mathematical genius!)

To turn Celsius into Fahrenheit: **C x 9 ÷ 5 + 32 = F**
To turn Fahrenheit into Celsius: **(F - 32) x 5 ÷ 9 = C**
